

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A method for programming a set-top box, comprising:
generating an electronic system guide identifying a plurality of sources providing signals to the set-top box;
selecting a first source of the plurality of sources from the electronic system guide as a first default source;
selecting a second source of the plurality of sources as a second default source;
detecting whether a channel number associated with an incoming signal is a non-overlapping channel number or an overlapping channel number; and
automatically programming ~~a non-overlapping~~the channel number to tune to a station for receiving television programs provided by the selected first default source in response to the channel number being the non-overlapping channel number and programming an overlapping~~the~~ channel number to tune to a station receiving television programs provided by the selected second default source in response to the channel number being the overlapping channel number.
2. (Currently Amended) The method of claim 1, further comprising:
generating a menu listing a satellite source and a cable source for a user to select ~~such that the non-overlapping channel number~~ to tunes to a station for receiving television programs provided by a selected one of the satellite source and cable source.
3. (Currently Amended) The method of claim 1, further comprising:
generating a menu listing a local TV antenna source for and a satellite source for a user to select ~~such that the non-overlapping channel number~~ to tunes to a station for receiving television programs provided by a selected one of the local TV antenna source and the satellite source.
4. (Previously Presented) The method of claim 1, wherein prior to selecting the second source of the plurality of sources, the method comprising generating a menu listing

sources of the plurality of sources, including the second source, for the user to select as the selected second source.

5. (Currently Amended) A system for providing a default source to at least one channel number usable by a plurality of sources providing a station to transmit television programs, comprising:

a processor configured to generate an electronic system guide identifying the plurality of sources; and

a selector controlled by the processor to automatically selecting 1) select a first default source of the plurality of sources in response to detecting ~~selection of~~ a non-overlapping channel number for television programs provided by the plurality of sources and for automatically program the system to tuning to a station for receiving television programs provided by the first default source, and 2) select a second default source of the plurality of sources in response to ~~selection detecting of~~ an overlapping channel number for television programs provided by the plurality of sources and automatically program the system in order to tune to a station for receiving television programs provided by the second default source.

6. (Original) The system of claim 5, wherein the processor is also configured to generate a menu listing a satellite source and a cable source for a user to select such that the at least one channel number tunes to a station for receiving television programs provided by a selected one of the satellite source and cable source.

7. (Original) The system of claim 5, wherein the processor is also configured to generate a menu listing a local TV antenna source and a satellite source for a user to select such that the at least one channel number tunes to a station for receiving television programs provided by a selected one of the local TV antenna source and satellite source.

8. (Original) The system of claim 5, wherein the television programs are transmitted using one of an analog signal and a digital signal.

9-11. (Cancelled.)

12. (Currently Amended) A method for providing a default source to channel numbers, the method comprising:

selecting a first default source to program for overlapping channel numbers being channel numbers used by a plurality of sources;

determining if any of the channel numbers used by the plurality of sources there are overlapping channel numbers, wherein, the over-lapping channel numbers being usable by a plurality of sources; and if there are over-lapping channel numbers,

listing the plurality of sources that may use using the over-lapping channel numbers,

selecting a second default source among the listed plurality of sources to program the over-lapping channel numbers, and

automatically programming the over-lapping channel numbers to tune to a station for receiving television programs provided by the selected second source, and in response to determining that any of the channel numbers used by the plurality of sources are non-overlapping channel numbers, automatically programming any the non-overlapping channel numbers to tune to a station for receiving television programs provided by the selected first source.

13. (Original) The method of claim 12, further comprising:

if there are no over-lapping channel numbers,

programming the channel numbers to tune to a station for receiving television programs provided by the selected first source.

14. (Original) The method of claim 12, wherein selecting a first source selects one of a local TV antenna source, cable source, and satellite source.

15. (Original) The method of claim 12, wherein selecting a second source selects one of a local TV antenna source, cable source, and satellite source.

16-17. (Cancelled.)

18. (Currently Amended) A system for providing a default source to channel numbers, comprising:

a processor configured to (1) generate an electronic system guide including an auto-program option to automatically program the channel numbers by identifying a plurality of first default sources~~a first default source and a second default source~~, and (2) determine if there are over-lapping channel numbers among the channel numbers, and if (3) automatically programming each ~~there are over-lapping channel numbers~~, to tune to the second default source in response to determining there are overlapping channel numbers, and (4) automatically programming any non-overlapping channel number to tune to the first default source in response to determining there are non-overlapping channel numbers among the channel numbers~~listing a plurality of second default sources that may use the over-lapping channel numbers~~; and

a selector controlled by the processor ~~configured to~~ (1) select ~~one of the plurality of first default sources in accordance with a user selecting one of the plurality of first default sources from the electronic system guide such that the~~ non-overlapping channel numbers tune to a station for receiving television programs provided by the ~~selected~~ first default source, and (2) select ~~one of the plurality of second default sources such that the~~ over-lapping channel numbers tune to a station for receiving television programs provided by the ~~selected~~ second default source.

19. (Currently Amended) The system of claim 18, wherein the ~~selected~~ first default source is one of a local TV antenna source, cable source, and satellite source.

20. (Currently Amended) The system of claim 18, wherein the ~~selected~~ second default source is one of a local TV antenna source, cable source, and satellite source.

21. (Currently Amended) An article of manufacture including one or more computer readable media with executable instructions therein, which, when executed by a processing device causes the processing device to:

select a first default source to program channel numbers;

determine if there are over-lapping channel numbers, the over-lapping channel numbers being usable by a plurality of programming sources; and

if there are over-lapping channel numbers,
list a plurality of second default sources,
select a second default source among the listed plurality of second default sources
to program the over-lapping channel numbers, and
automatically program the over-lapping channel numbers to tune to a station
provided by the selected second default source and automatically program any non-over-
lapping channel numbers to tune to a station provided by the selected first default source.

22. (Currently Amended) The system of claim 18, wherein the over-lapping channel numbers are channel numbers that are used by ~~the~~ a first plurality of channel numbers associated with the first default source and the a second plurality of channel numbers associated with the second default source.

23. (Currently Amended) The system of claim 18, wherein the selection of ~~one of the~~ first default sources and the second default sources is automatic.
